Perspective Jewellers

BUSINESS MANIFESTO · BUSINESS MODEL, REVENUE STREAMS AND THREATS

A small, honest jewellery brand built on a 360° viewer.

Our mission. To make jewellery that is beautiful to wear, easy to understand, and kinder to the people and places behind it.

At a glance	
B2C classification	E-tailer: we sell physical products online. (C2C does not apply.)
B2B classification	Sells a service (360° product views) directly to individual businesses, similar to the Distributor model.
Business strategy	Differentiation (360° viewer, education), Niche (eco-minded everyday jewellery) and Customer intimacy (personalization). Not competing on lowest cost or broad scope.
Organizational structure	Flat and collaborative.

1. Value proposition

- **Personalization:** engraving previewed in the colour of the chosen gold or silver finish; a “Suggest me” button for shoppers who cannot decide; a finish switcher inside the 360° view.
- **Ease of use:** username-only login, a 360° viewer with zoom and keyboard controls, short bullet-point education on materials and certificates, and a simple checkout.
- **Transparency:** no sustainability or certification claim is shown as verified until evidence exists.

2. Revenue model

Our main income is **sales revenue** from jewellery, supported by a B2B service. Below, each standard revenue model and how we use it.

Revenue model	Status	How it works for us
Sales revenue	Active (sample)	Selling jewellery. Sample prices: Pebble Necklace $110, Terra Ring $125, Sol Hoops $145. Engraving adds $15.
Subscription	Active (sample)	B2B Studio plan: $99 per month hosting for a client’s 360° product views.
Transaction	Active (sample)	B2B fee per product modelled: $29 (Starter) or $24 (Studio). Enterprise priced by quote.
Freemium	Idea	Offer one free 360° demo model, then charge for colour switching, logo preview and analytics.
Affiliate	Idea	Links to jewellery-care products or verified suppliers, earning a commission. Not active.
Advertising	Not used	No ads on the site. Keeps the shopping experience calm and trustworthy.

Status key: Active (sample) = built into this concept site with sample prices. Idea = possible later. Not used = deliberately left out.

3. Market opportunity

Who we target. People who shop online for everyday and gift jewellery and care where it comes from. **Demographics** (target definition): online shoppers, mainly young adults, who buy gifts for others. **Psychographics**: values sustainability and transparency, likes simple, natural styles, enjoys personal touches such as engraving. These are our targets and still need to be validated with research.

Market sizing worksheet

Average selling price (ASP) from our catalogue: ($125 + $145 + $110) ÷ 3 = **$126.67**. Engraving (+$15) would raise this when chosen.

Measure	Formula	Our number
Total potential market opportunity	# of opportunities × ASP	[add researched number]
Total addressable market (TAM)	# targetable opportunities × ASP	[add researched number]
Segmented market	# of opportunities targeted in our model × ASP	[add researched number]
Expected share	Expected win rate × segmented market	[add researched number]

Fill in the last column with figures from a cited source. We have not invented market numbers.

4. Competitive environment

Other companies matter by **size, share, pricing and profitability**. The types of competitor we face:

Competitor type	What they offer	Where we differ
Mass-market jewellery chains	Wide range, low prices, many stores.	We offer small collections, transparency and a closer look through 360°.
Ethical online jewellery brands	Sustainability story, direct-to-consumer.	We add education, engraving colour preview and a B2B viewer service.
Handmade marketplaces	Unique pieces from many sellers.	We offer one consistent brand, one viewer and clear disclosures.
3D / AR product-viewer software (B2B)	Tools that businesses license.	We bundle modelling and hosting as a service, with the same technology used in our shop.

To do for the assignment: pick 2–3 named competitors and add their size, market share, pricing and profitability.

5. Competitive advantage

Our **internal strengths** that other firms do not have in the same combination:

- **Economies of scale:** the same 360° viewer technology is reused for our own jewellery and for B2B clients, so each extra product costs less to add.
- **Education first:** plain-word explanations of materials and certificates make shoppers feel informed, not sold to.
- **Personal touch:** engraving and the “suggest me” feature make a small catalogue feel tailored.

- **Honesty as a brand:** disclosures are on the site, and claims wait for proof.

6. Market strategy

- **Instagram:** product photos, short spin-around clips of each piece, customer engraving ideas.
- **YouTube:** short explainers (“vermeil vs plated”, “what does RJC mean?”) and behind-the-scenes content.
- **B2B:** the “For business” page, with a live shirt demo, pricing and a contact form, turns visitors into sales leads.
- **Optional:** an X (Twitter) account for news and links, if time allows.

7. Organizational structure

- A **flat, collaborative** structure: every team member can make decisions in their area.
- It suits a small start-up that needs to move quickly and test ideas.
- Other options considered: functional (hierarchical) and matrix (people report to more than one manager, project-based). Both add layers that a small team does not need.

8. Management team

The team’s background and knowledge capital is what makes the plan credible. Roles we need:

Role	Name	Background and knowledge capital
Creative and brand lead	[add name]	[add background]
Technology lead (web and 3D)	[add name]	[add background]
Sourcing and operations lead	[add name]	[add background]

Threats and disruption

The main threats to the business, why each matters, and our response.

Threat	Why it matters	Our response
Competitors copy the 360° viewer	Technology alone is easy to imitate.	Keep adding value around it: education, engraving, the B2B service and a trusted brand.
Customers doubt eco claims	Greenwashing is common, and we hold no certifications yet.	Publish only verified claims, explain certificates in plain words, and collect supplier documents before launch.
Metal price swings	Gold and silver prices change, which can squeeze margins.	Review prices regularly, keep collections small, and look at fixed-price supplier agreements.
Can’t try it on online	Shoppers worry about look and fit, and returns cost money.	360° views, a clear sizing guide and a simple returns policy (planned).
Digital disruption	Bigger players could add AR try-on or 3D customisation and make our viewer feel ordinary.	Stay niche, move quickly, and build customer intimacy through personalization.
Supplier and certification gaps	We cannot promise ethical sourcing without evidence.	Choose suppliers who can provide documentation, and keep the disclosures section up to date.

Digital disruption

A disruptor uses new technology to change an industry. It usually follows four stages:

- **1.** The disruptor enters the market.
- **2.** The disruptor’s product gets better.
- **3.** It becomes the default choice.
- **4.** Older companies that did not adapt fade out.

Our 360° viewer is a small disruptor to static product photos. At the same time, larger platforms adding AR try-on could disrupt us, so we keep our advantage in trust, education and personalization.

Disclosures

- Perspective Jewellers is a concept storefront created for a school project.
- Products, prices, the checkout and the B2B pricing, terms and contacts are samples. No real orders or payments are taken.
- We hold no certifications yet. Any certificate will be shown only once it is verified.
- Material and impact claims are goals, pending verification by suppliers.
- Market numbers and team details marked with square brackets still need to be added.
